

ASSERTION

AUTOMATED COMPLIANCE FOR ENTERPRISE APPLICATIONS

Why CIOs love Assertion

SECURE YOUR ENTERPRISE APPLICATIONS

 Automated Compliance

 Regular and affordable scans

 Support for Avaya, Cisco, and Microsoft

With Assertion in your enterprise, you can be sure that:

- System configuration complies with stated policies
- Systems continue to comply with the law of the land
- Systems adhere to organization security requirements

Assertion ensures that policy compliance for your enterprise applications is a breeze. Don't waste time with manual procedures done once a year - just use Assertion once a week and keep your systems fully compliant, each time, every time.

If your organization considers compliance and security of your applications to be critical, Assertion is the tool you need.

HOW AN ENTERPRISE USES ASSERTION

A bank would require 500 person days to check each of its 500 servers, where each server would require 10,000 checks or more. Moving to global compliance standards by doing a manual compliance check every two weeks was impractical.

Solution: Move to Assertion. Assertion runs 2000 checks per minute, so the time to perform a compliance scan is less than 5 minutes per server. The entire enterprise can be scanned in a matter of hours.

HOW THEY BENEFIT

- Time Savings: More than 100,000 hours in savings!
- Automated Compliance: Ensuring that every device starts off as compliant and always remains so
- Reduced Risk: Security holes uncovered and fixed
- From ad-hoc to organized: Making compliance a habit, part of Business As Usual

Reports

- Detailed drill-down reports, with filter capabilities to quickly zero in on compliance issues
- Geo spatial reports for a global view of the enterprise compliance
- Historical and Live reports

Licensing

- Enterprise, on-Premise
- Works on customer provided VM and OS (RHEL Linux)
- Secure, locked-down configuration for a risk-free operation
- LDAP integration

Priced as low as \$1 per day!!!

Ready for business

- HTTPS connection to Assertion server
- Sensitive files are encrypted
- Connections to target systems over secure channel
- Target systems are accessed via read-only logins
- No agent needed on target system

Security

- Simple, affordable licensing
- Option of subscription and consumption licenses
