

## Toll Compliance in India – The Challenge

TRAI toll compliance regulations are a significant challenge to comply with, especially if you are a nationally and globally distributed organization. And the regulatory backlash for non-compliance can include:

- Punitive penalties, including forfeiture of deposits
- Cancellation of registration
- Debarment of registration for up to 3 years

Until now, compliance has always been a manual effort, making it:

- Slow and time-consuming
- Resource-intensive and expensive
- Prone to errors and mistakes

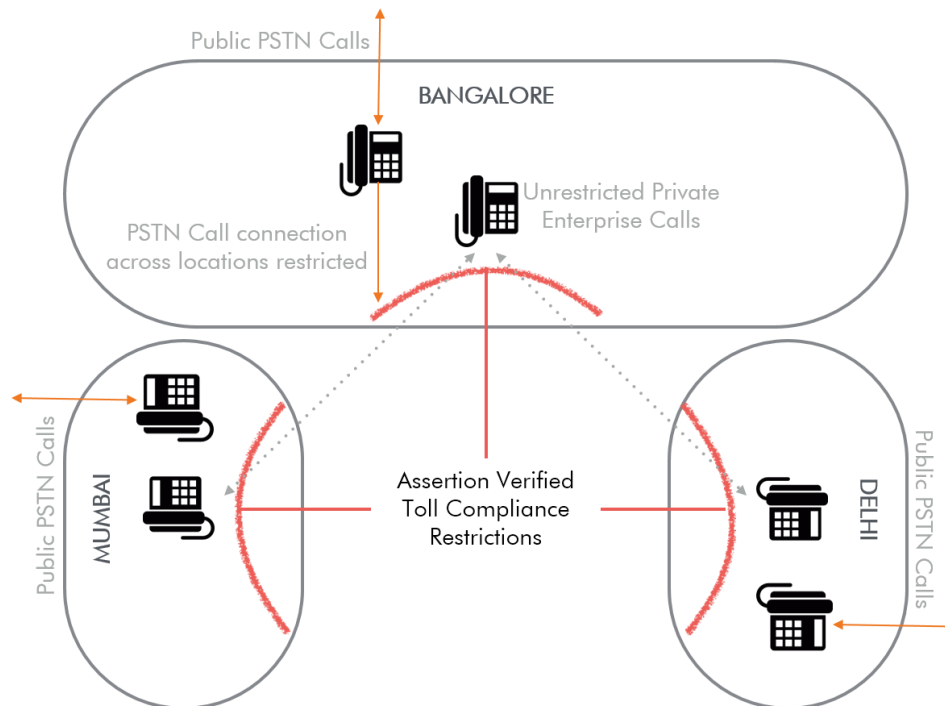

Take the example of an Avaya-based communications network. Due to the complexity of the systems, and the specificity of TRAI regulations, there is no one button that automatically ensures TRAI compliance. For an Avaya Aura solution to be compliant, each network element must be compliant. One must therefore check, at minimum, the configuration of

- PBX systems
- Gateways
- Session border controllers
- Adjuncts
- Trunks
- Session managers

Checking the system manually will always leave an organization open to the risk that the administrator made a mistake in the checking.

# Assertion – The Solution

Assertion is an enterprise-grade platform for automated compliance of multiple enterprise applications. Assertion comes with an India Toll Compliance package that can scan the various configurations on communications systems (like PBXs) and provide a report on the compliance of the enterprise.

## Features:

- Quickly verify location configurations of the various resources like trunks, stations, gateways and regions
- Automatically scan and verify the private network and public network routing configurations
- Easily corroborate Inter-PBX special toll compliance features (like SA9122 on Avaya CM)
- Validate tenant and other logical partitioning settings
- Ensure all settings for call forwarding, coverage and other forms of call redirection for all the endpoints and trunks are configured to meet toll compliance regulations
- Align other controls with documented industry best practices

Assertion's India Toll Compliance package ensures that you can run a check to confirm compliance within minutes, so you can rest assured that your systems are always aligned with regulatory policy.

**India Toll Compliance package is available for sale now with Assertion Express!** For more details, speak with our business partners immediately! Email us at [sales@assertion.in](mailto:sales@assertion.in) or visit us at [www.assertion.in](http://www.assertion.in)

Assertion enables automated compliance for enterprise applications and was conceptualized by experts with more than 100 years of cumulative experience in the field of enterprise communications and automation. Our team has 11 granted patents and multiple pending patent applications worldwide.
